PRESENTS

How to Reduce High Bites and Open/Tight Contacts and Guarding your Patient's Occlusal Health

Wednesday June 16, 2004 9:00AM - 4:00PM **ALL DAY 6 CEU** Dr. Robert Cowie
COST: MCDS / NJDA members \$75---Staff \$25 Non-Members \$150 **includes Box Lunch**

How to Reduce High Bites and Open/Tight Contacts

Too many models look perfect on the model only to fall drastically short of expectations at the seating appointment. The necessary time-consuming adjustments to the occlusion and/or contacts can leave you and your patient feeling frustrated.

Finding a laboratory that can deliver a completed case requiring little to no adjustment is the biggest challenge a dentist faces when prescribing a crown or bridge. To identify factors that determine whether a crown will fit, a study was recently undertaken to explore dentist-laboratory interaction and how it ultimately affects case outcome.

In "How to Reduce High Bites & Open/Tight Contacts," Dr. Robert Cowie will review the study results to shed light in what goes wrong and to offer suggestions that will prevent future mistakes.

Seminar highlights include:

- Review of the study, analyzing occlusion and contacts of 30 single-unit crowns
- Photo documentation of crowns as they came back from the laboratory and then after adjustment
- Step-by-step protocol for seating a crown that will help the dentist or assistant evaluate the result from the lab
- Time- and money-saving tips that will minimize adjustments
- Simple steps to improve the predictability and profitability of your single crowns
- Principles that can be applied to make big crown and bridge cases better and easier
- How to use your laboratory as a resource to help you provide better quality dentistry

Guarding your Patient's Occlusal Health

Are you looking for ways of providing better service for your patients? Setting yourself apart from the rest of the dentists in the area? Providing a service that is relatively easy to deliver, of value to your patient, and that can be profitable to the dentist and their team? It is time that the dental community reengineer their practices to treat occlusal disease as effectively as we learned to treat bacterial disease.

Program Highlights:

- The indications for a nightguard
- The etiology of occlusal wear
- Which arch should receive the appliance
- The steps needed to fabricate a nightguard
- How to decrease delivery time and get a predictable result
- And how to get the patient to say yes on Monday morning to accepting treatment

Dr. Robert Cowie is a 1976 graduate of Northwestern University Dental School and practices in Jacksonville, Florida. He holds membership in numerous professional organizations including the Jacksonville Dental Society [past President], the AGD, the American Equilibration Society, the Florida Academy of Dental Practice Administration, and the Pierre Fauchard Academy. He completed the continuums at the Center for Advanced Dental Studies and the L.D.Pankey Institute. Dr. Cowie has lectured nationally while continuing to practice a minimum of 30 hrs. a week chairside.

These seminars are available to our members as a member benefit of MCDS
Please note that the Dr. Robert Cowie seminar on June 16, 2004 normally has a fee of \$189 for Dentists and \$129 for Staff...this is certainly a fantastic saving for MCDS members and staff
